    }
}
```

Pacemaker Tests

- Model

- API

- Serializer

PacemakerAPI (1)

- Implement the core features of the pacemaker service.
- Not concerned with UI at this stage.

```
public class PacemakerAPI
{
    private Map<Long, User>   userIndex      = new HashMap<>();
    private Map<String, User> emailIndex     = new HashMap<>();
    private Map<Long, Activity> activitiesIndex = new HashMap<>();

    //...

    public Collection<User> getUsers ()
    {
        return userIndex.values();
    }

    public void deleteUsers()
    {
        userIndex.clear();
        emailIndex.clear();
    }

    public void deleteUser(Long id)
    {
        User user = userIndex.remove(id);
        emailIndex.remove(user.email);
    }

    public Activity createActivity(Long id, String type,
                                   String location, double distance)
    {
        Activity activity = null;
        Optional<User> user = Optional.fromNullable(userIndex.get(id));
        if (user.isPresent())
        {
            activity = new Activity (type, location, distance);
            user.get().activities.put(activity.id, activity);
            activitiesIndex.put(activity.id, activity);
        }
        return activity;
    }
}
```

PacemakerAPI (2)

```
public class PacemakerAPI
{
    private Map<Long, User>  userIndex      = new HashMap<>();
    private Map<String, User> emailIndex    = new HashMap<>();
    private Map<Long, Activity> activitiesIndex = new HashMap<>();

    //...

    public Activity getActivity (Long id)
    {
        return activitiesIndex.get(id);
    }

    public void addLocation (Long id, float latitude, float longitude)
    {
        Optional<Activity> activity = Optional.fromNullable(activitiesIndex.get(id));
        if (activity.isPresent())
        {
            activity.get().route.add(new Location(latitude, longitude));
        }
    }
}
```

A note on the Optional Class

Guava and Java 8

"Null sucks." - [Doug Lea](#)

"I call it my billion-dollar mistake." - [Sir C. A. R. Hoare](#), on his invention of the null reference

- Careless use of null can cause a staggering variety of bugs.
- Null is highly ambiguous, e.g., Map.get(key) can return null because
 - the value in the map is null,
 - or the value is not in the map.
- i.e. Null can mean failure, can mean success, can mean almost anything. Using something other than null makes your meaning clear.

Why use the Optional Class?

*“**Optional** is primarily used for two things:*

*to make it clearer what you would've
meant by null,*

*and in method return values to make
sure the caller takes care of the ‘absent’ case”.*

Where should we use the Optional Class?

*“We **certainly** don't advocate replacing every nullable value with an Optional everywhere in your code -- we certainly don't do that within Guava itself!*

A lot of this will have to be your decision – there's no universal rule, it's a relatively subjective judgement.”

Guava Contributor

<http://stackoverflow.com/questions/11561789/guava-optional-how-to-use-the-correct>

Optional (Guava Component version)

- **Optional** is an immutable object used to contain a not-null object.
- **Optional** object is used to represent null with an absent value.
- This class has various utility methods to facilitate the code to handle:
 - values as available (present) or
 - values as not available (absent)
- instead of checking null values.

Optional in the Guava Component

```
Optional<Activity> activity = Optional.fromNullable(activitiesIndex.get(id));  
if (activity.isPresent())  
{  
    activity.get().route.add(new Location(latitude, longitude));  
}
```

- activitiesindex.get(id) will return null if id not present.
- Wrap this in a 'Optional' wrapper object - noting that the object it wraps may be null.
- Use 'isPresent' to determine wrapped object is null or not.

Optional in JDK 8

“A container object which may or may not contain a non-null value.”

Modifier and Type	Method and Description
static <T> Optional <T>	empty() Returns an empty Optional instance.
boolean	equals(Object obj) Indicates whether some other object is "equal to" this Optional.
Optional <T>	filter(Predicate<? super T> predicate) If a value is present, and the value matches the given predicate, return an Optional describing the value, otherwise return an empty Optional.
<U> Optional <U>	flatMap(Function<? super T,Optional<U>> mapper) If a value is present, apply the provided Optional-bearing mapping function to it, return that result, otherwise return an empty Optional.
T	get() If a value is present in this Optional, returns the value, otherwise throws NoSuchElementException.
int	hashCode() Returns the hash code value of the present value, if any, or 0 (zero) if no value is present.
void	ifPresent(Consumer<? super T> consumer) If a value is present, invoke the specified consumer with the value, otherwise do nothing.
boolean	isPresent() Return true if there is a value present, otherwise false.
<U> Optional <U>	map(Function<? super T,? extends U> mapper) If a value is present, apply the provided mapping function to it, and if the result is non-null, return an Optional describing the result.
static <T> Optional <T>	of(T value) Returns an Optional with the specified present non-null value.
static <T> Optional <T>	ofNullable(T value) Returns an Optional describing the specified value, if non-null, otherwise returns an empty Optional.
T	orElse(T other) Return the value if present, otherwise return other.
T	orElseGet(Supplier<? extends T> other) Return the value if present, otherwise invoke other and return the result of that invocation.
<X extends Throwable> T	orElseThrow(Supplier<? extends X> exceptionSupplier) Return the contained value, if present, otherwise throw an exception to be created by the provided supplier.
String	toString() Returns a non-empty string representation of this Optional suitable for debugging.

PacemakerAPI

```
public class PacemakerAPI
{
    private Map<Long, User>   userIndex    = new HashMap<>();
    private Map<String, User> emailIndex    = new HashMap<>();
    private Map<Long, Activity> activitiesIndex = new HashMap<>();
```

```
//...
```

```
public Collection<User> getUsers ()
{
    return userIndex.values();
}
```

```
public void deleteUsers()
{
    userIndex.clear();
    emailIndex.clear();
}
```

```
public void deleteUser(Long id)
{
    User user = userIndex.remove(id);
    emailIndex.remove(user.email);
}
```

```
public Activity createActivity(Long id, String type,
                               String location, double distance)
```

```
{
    Activity activity = null;
    Optional<User> user = Optional.fromNullable(userIndex.get(id));
    if (user.isPresent())
    {
        activity = new Activity (type, location, distance);
        user.get().activities.put(activity.id, activity);
        activitiesIndex.put(activity.id, activity);
    }
    return activity;
}
```

```
public class PacemakerAPI
```

```
{
    private Map<Long, User>   userIndex    = new HashMap<>();
    private Map<String, User> emailIndex    = new HashMap<>();
    private Map<Long, Activity> activitiesIndex = new HashMap<>();
```

```
//...
```

```
public Activity getActivity (Long id)
{
    return activitiesIndex.get(id);
}
```

```
public void addLocation (Long id, float latitude, float longitude)
{
    Optional<Activity> activity = Optional.fromNullable(activitiesIndex.get(id));
    if (activity.isPresent())
    {
        activity.get().route.add(new Location(latitude, longitude));
    }
}
```

PacemakerAPITest (1)

```
public class PacemakerAPITest
{
    private PacemakerAPI pacemaker;

    @Before
    public void setup()
    {
        pacemaker = new PacemakerAPI(null);
        for (User user : users)
        {
            pacemaker.createUser(user.firstName, user.lastName, user.email, user.password);
        }
    }

    @After
    public void tearDown()
    {
        pacemaker = null;
    }

    @Test
    public void testUser()
    {
        assertEquals (users.length, pacemaker.getUsers().size());
        pacemaker.createUser("homer", "simpson", "homer@simpson.com", "secret");
        assertEquals (users.length+1, pacemaker.getUsers().size());
        assertEquals (users[0], pacemaker.getUserByEmail(users[0].email));
    }

    @Test

```

```
        new Location(44.4f, 23.3f)
```

```
    };
```

```
}
```

Verify Fixture

```
@Test
public void testPopulate()
{
    pacemaker = new PacemakerAPI(null);
    assertEquals(0, pacemaker.getUsers().size());
    populate (pacemaker);

    assertEquals(users.length, pacemaker.getUsers().size());
    assertEquals(2, pacemaker.getUserByEmail(users[0].email).activities.size());
    assertEquals(2, pacemaker.getUserByEmail(users[1].email).activities.size());
    Long activityID = pacemaker.getUserByEmail(users[0].email).activities.keySet().iterator().next();
    assertEquals(locations.length, pacemaker.getActivity(activityID).route.size());
}
```

Serializer Test (XML)

```
@Test
public void testXMLSerializer() throws Exception
{
    String datastoreFile = "testdatastore.xml";
    deleteFile (datastoreFile);

    Serializer serializer = new XMLSerializer(new File (datastoreFile));

    pacemaker = new PacemakerAPI(serializer);
    populate(pacemaker);
    pacemaker.store();

    PacemakerAPI pacemaker2 = new PacemakerAPI(serializer);
    pacemaker2.load();

    assertEquals (pacemaker.getUsers().size(), pacemaker2.getUsers().size());
    for (User user : pacemaker.getUsers())
    {
        assertTrue (pacemaker2.getUsers().contains(user));
    }
    deleteFile ("testdatastore.xml");
}
```
