pacemaker-console-xtend

The assignment solution has:

- a number of source files.
- interdependencies between these files.

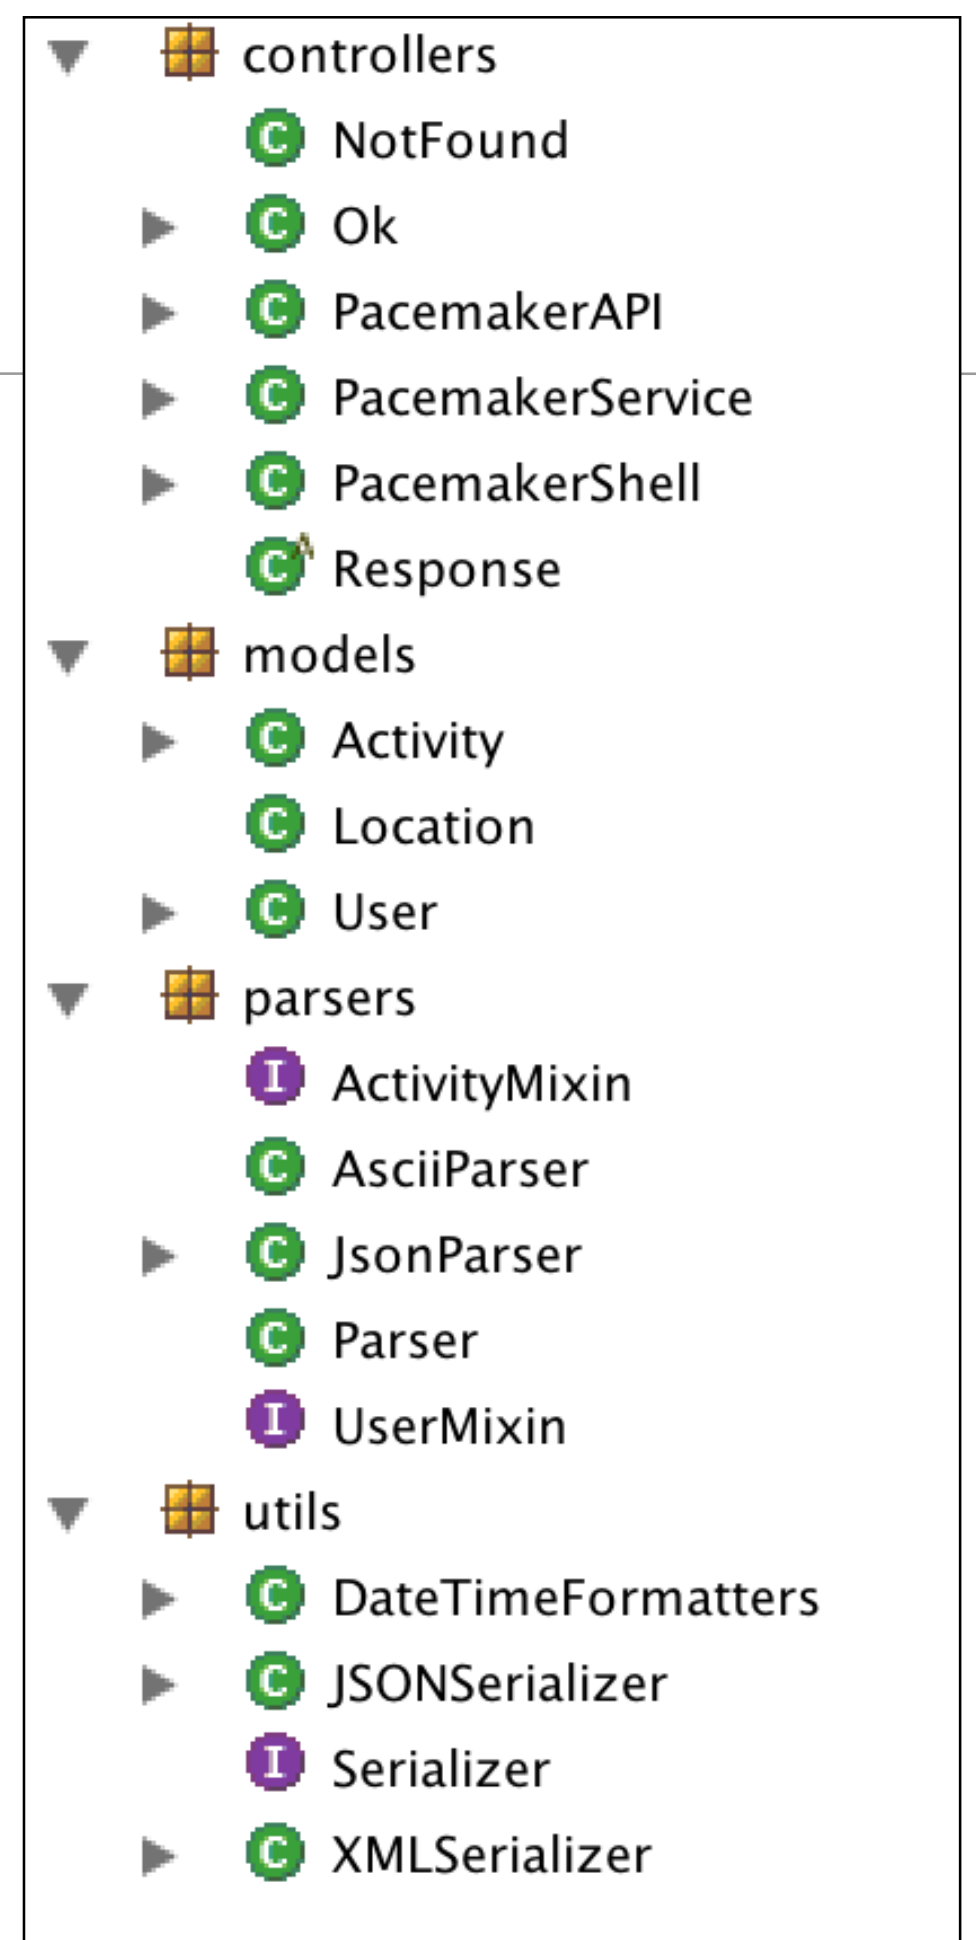

Physical Organisation

Containment model (dependency graph)

- Use containers (packages) to manage complexity.
- Containment creates dependencies between containers.
- How we organise our containers is key to controlling dependencies between the containers.

Dependencies

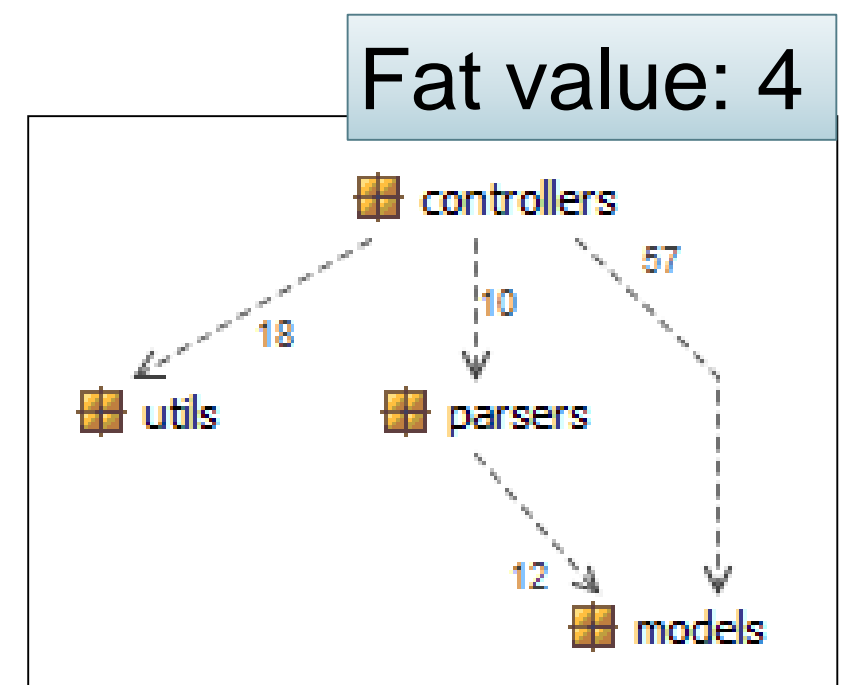

- When dependencies all point in the same direction (e.g. downwards), the cumulative dependency is smallest.
- When you have cyclical dependencies (i.e. dependencies pointing upwards) the cumulative dependency becomes large and you have what is called a **Design Tangle**.

Measuring complexity in a code base.

Excess complexity is measured in terms of 2 metrics:

- Fat is a measure of the compositional (breakout) complexity at **every level** e.g. number of edges in a dependency graph. Default threshold in Structure101 is 15 (methods), 120 (design, package, class level).
- Design Tangles are cyclic dependencies between packages, measured at the breakout of high-level packages ("design level"). Default threshold in Structure101 is 0% - always undesirable!

Dependency graph (models)

Fat value: 2 (edges)

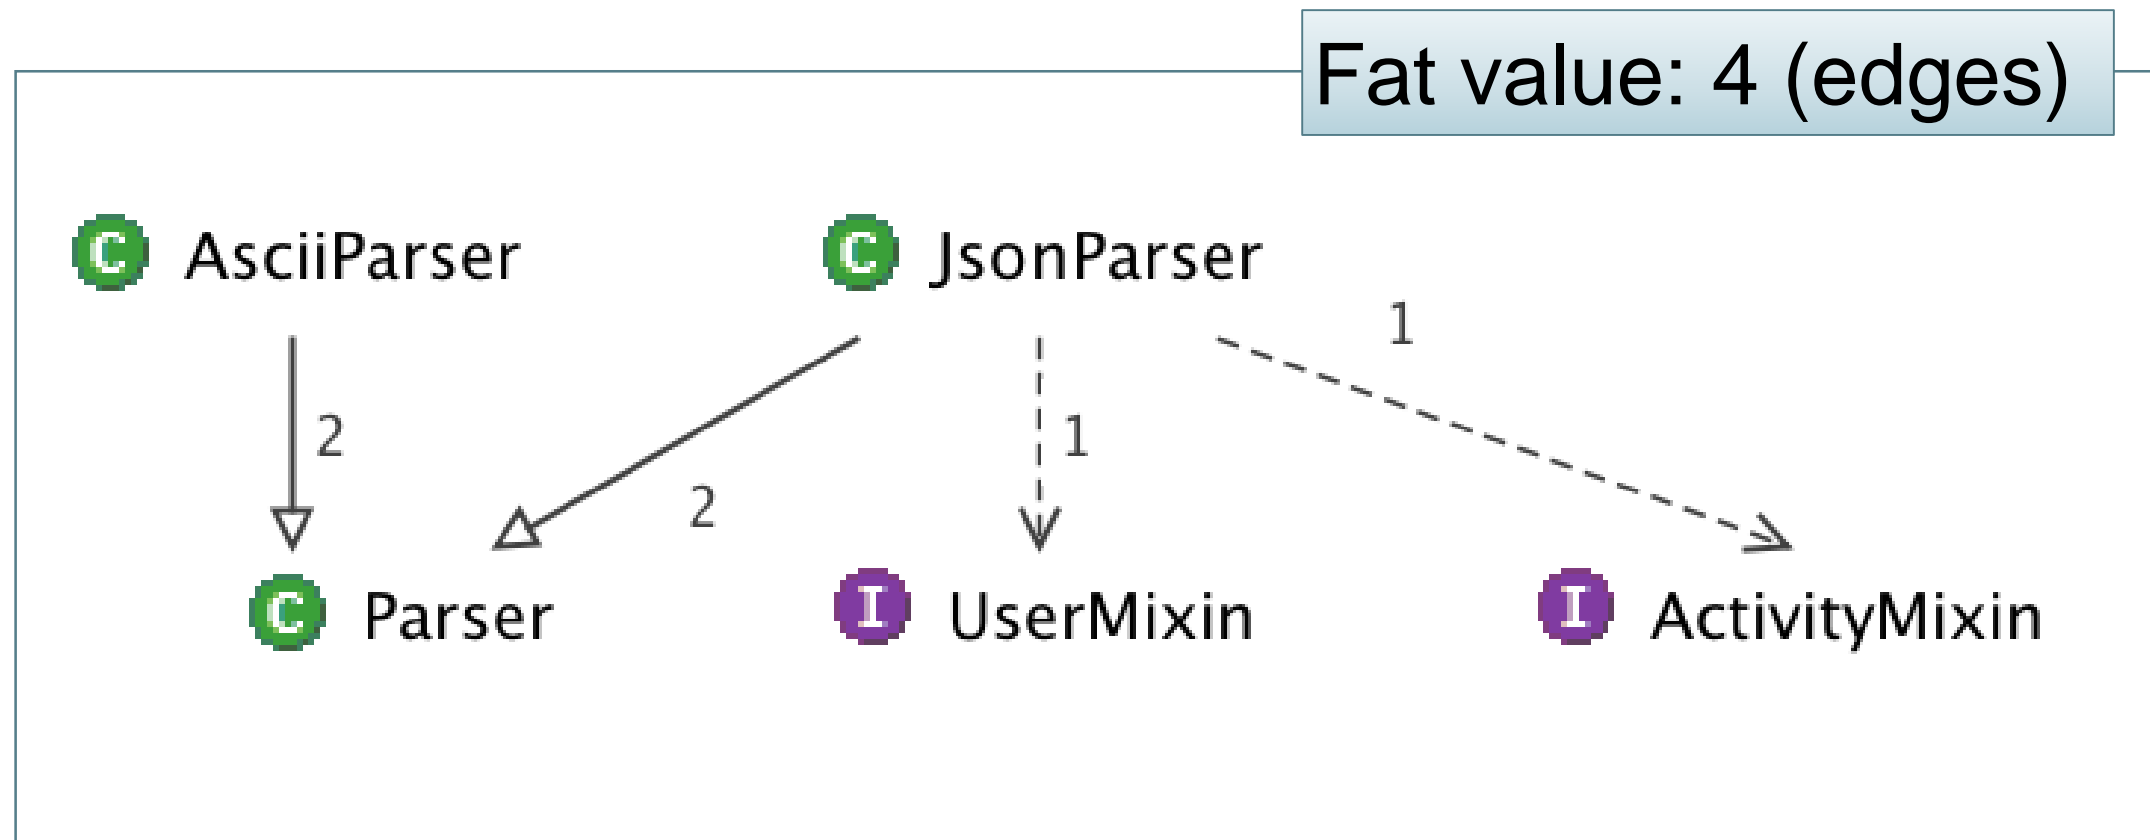

Dependency graph (utils)

Fat value: 2 (edges)

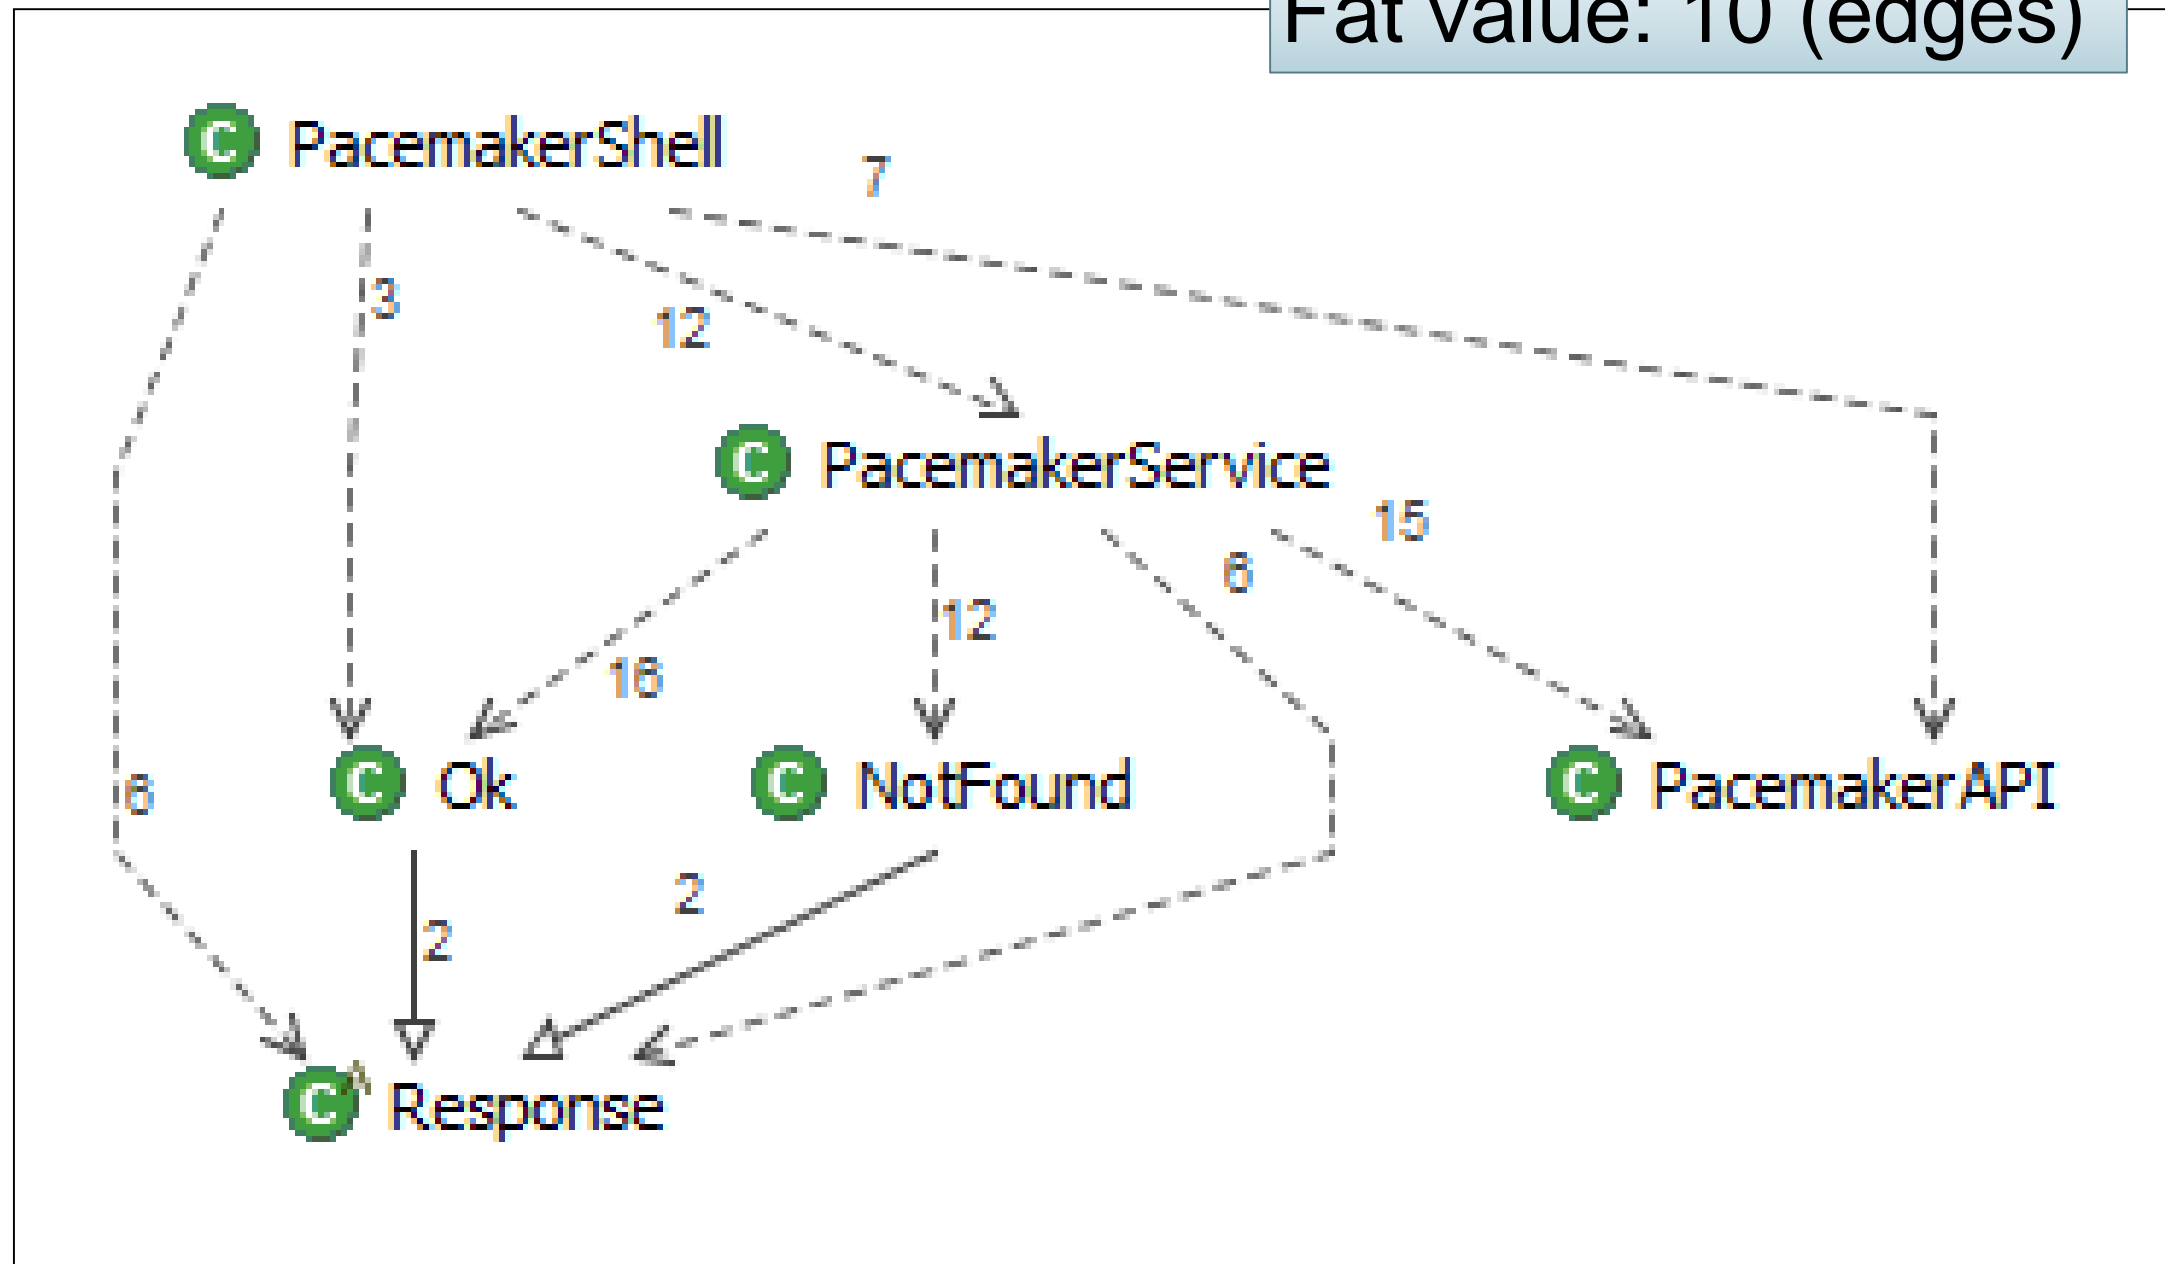

Dependency graph (parsers)

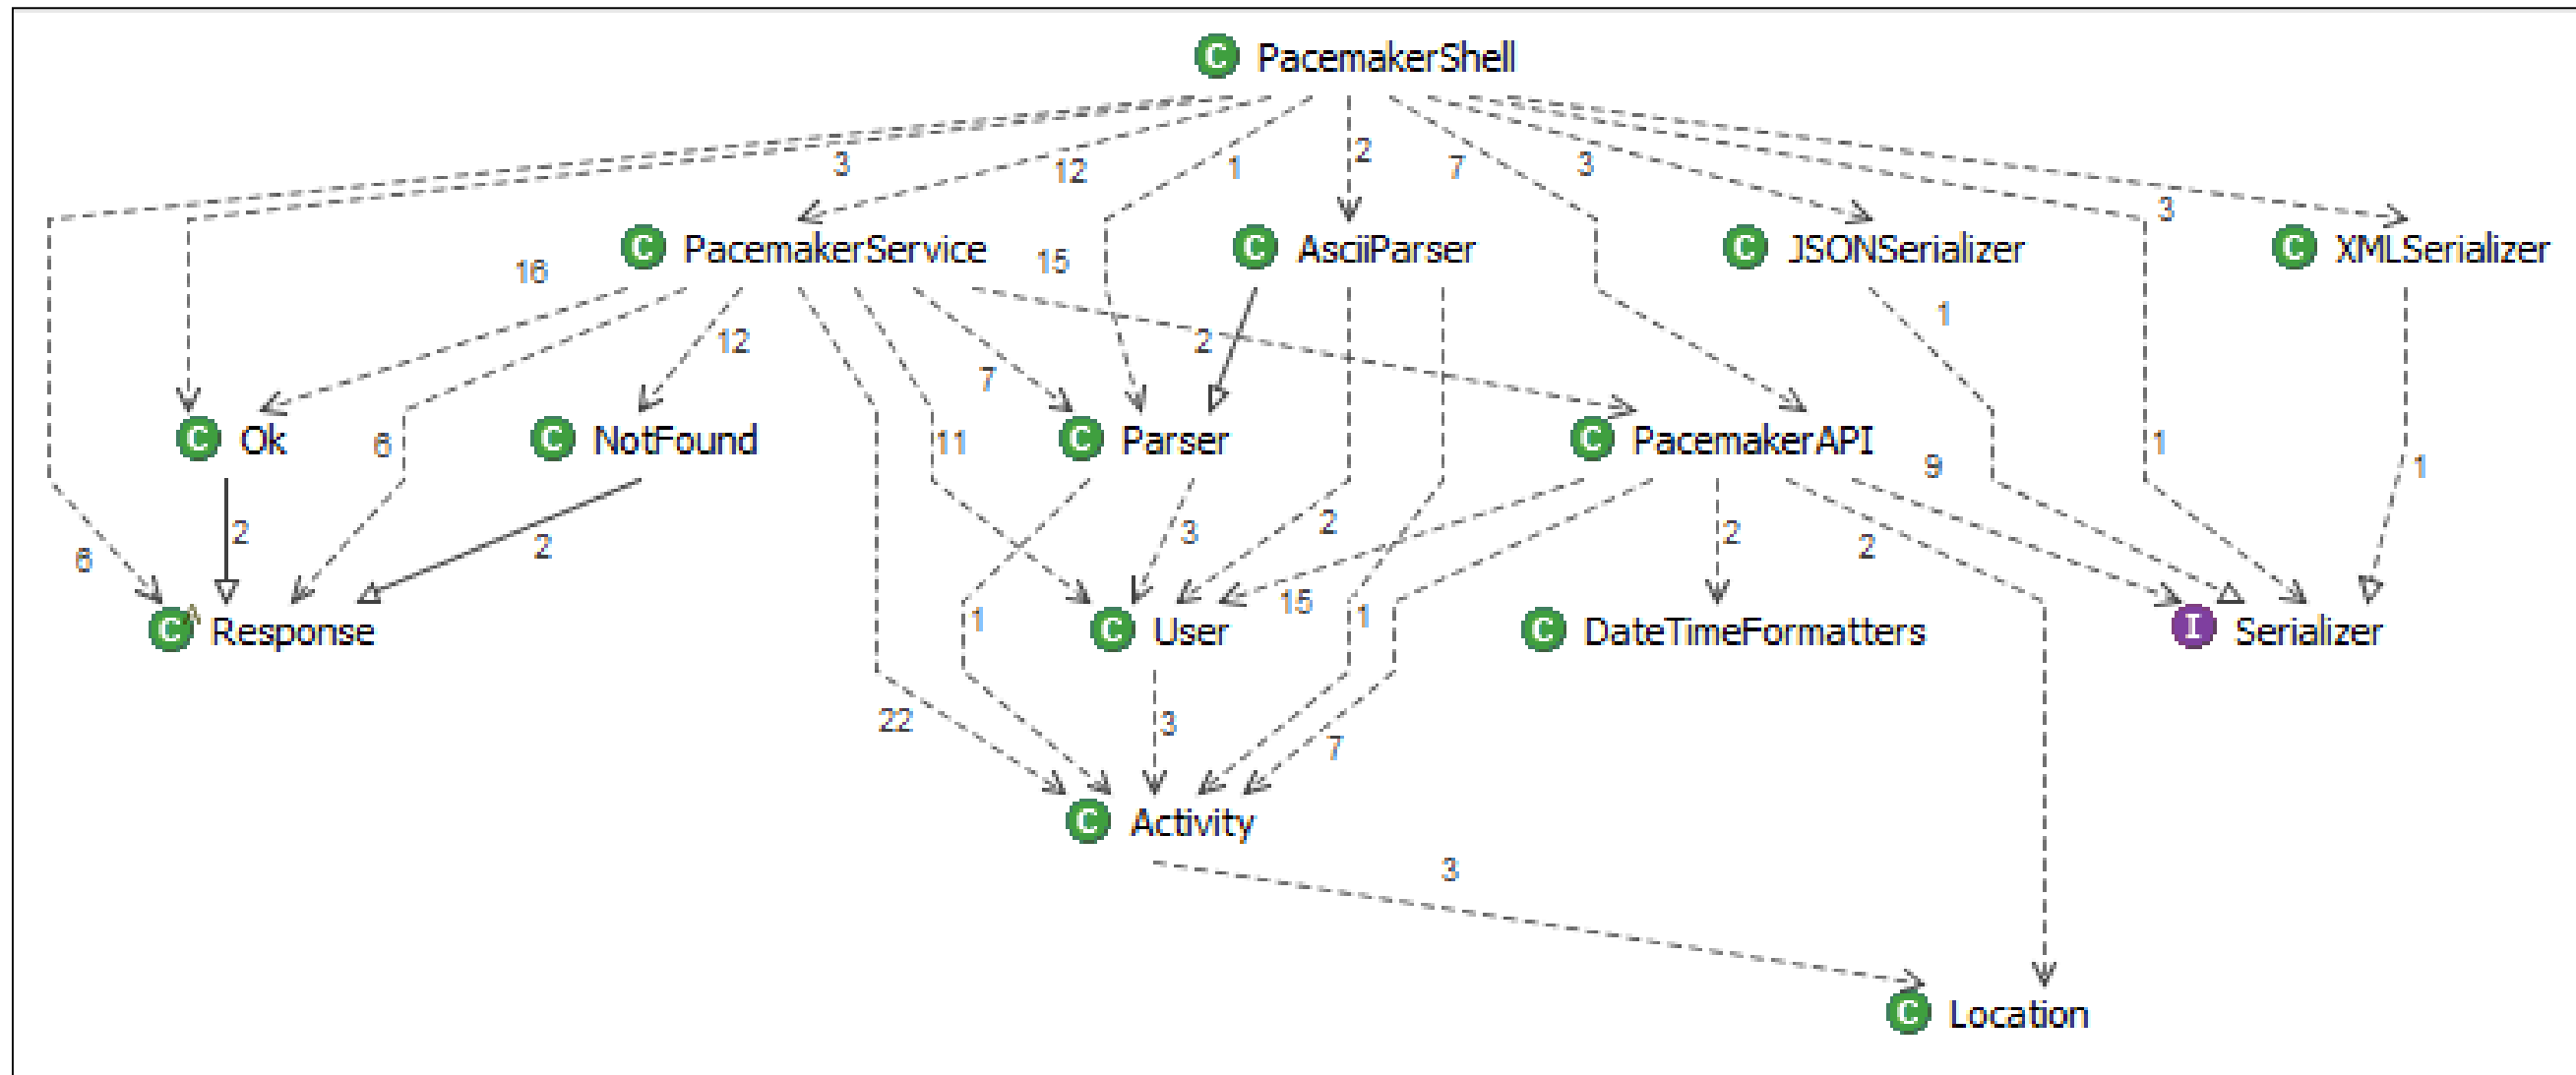

Dependency graph (controllers)

Fat value: 10 (edges)

Dependency graph (no externals)

Summary of pacemaker-console-xtend

Flat Tangles

Level	#Items	#Tangles	#Tangled items	Biggest	Degree
Leaf package	4	0	0	0	0%
Jar	1	n/a	n/a	n/a	n/a
Outer class	18	0	0	0	0%

XS breakout by metric (and scope)

Metric (and scope)	Threshold	#Offenders	Offenses (%)	XS contribution
Tangled (design)	0	0 of 1	0%	0%
Fat (design)	120	0 of 1	0%	0%
Fat (leaf package)	120	0 of 4	0%	0%
Fat (class)	120	0 of 23	0%	0%
Fat (method)	15	2 of 123	2%	100%
Total				100%

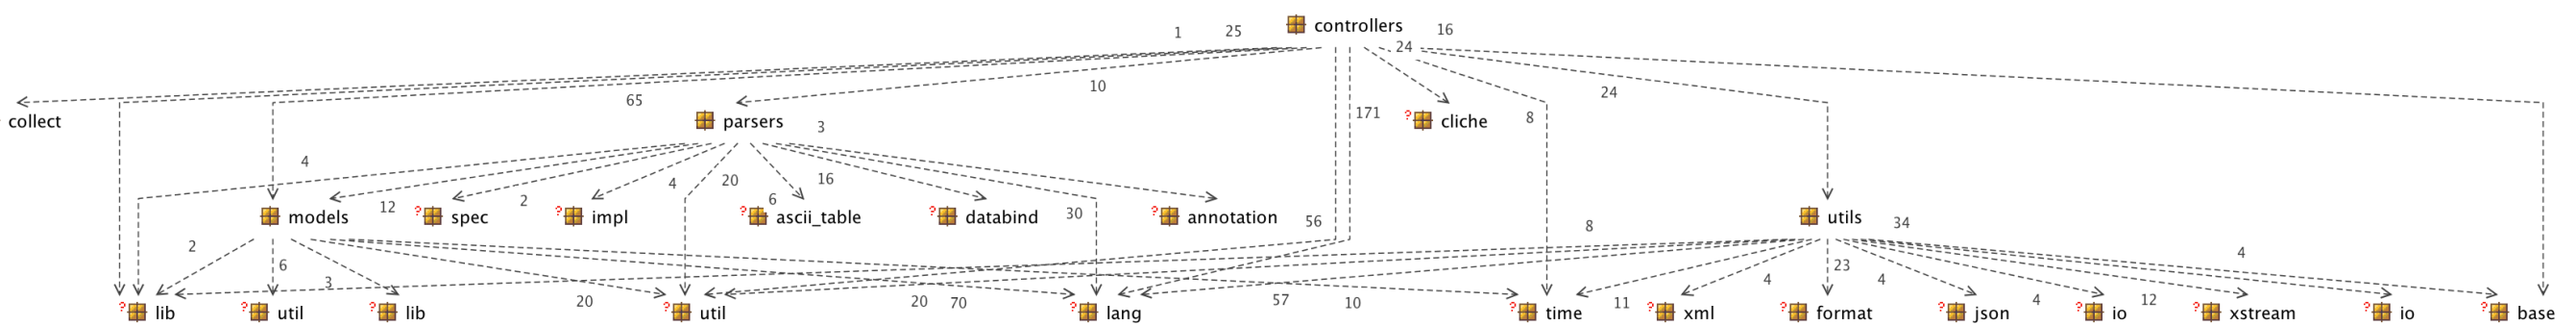

Items with highest XS: 2

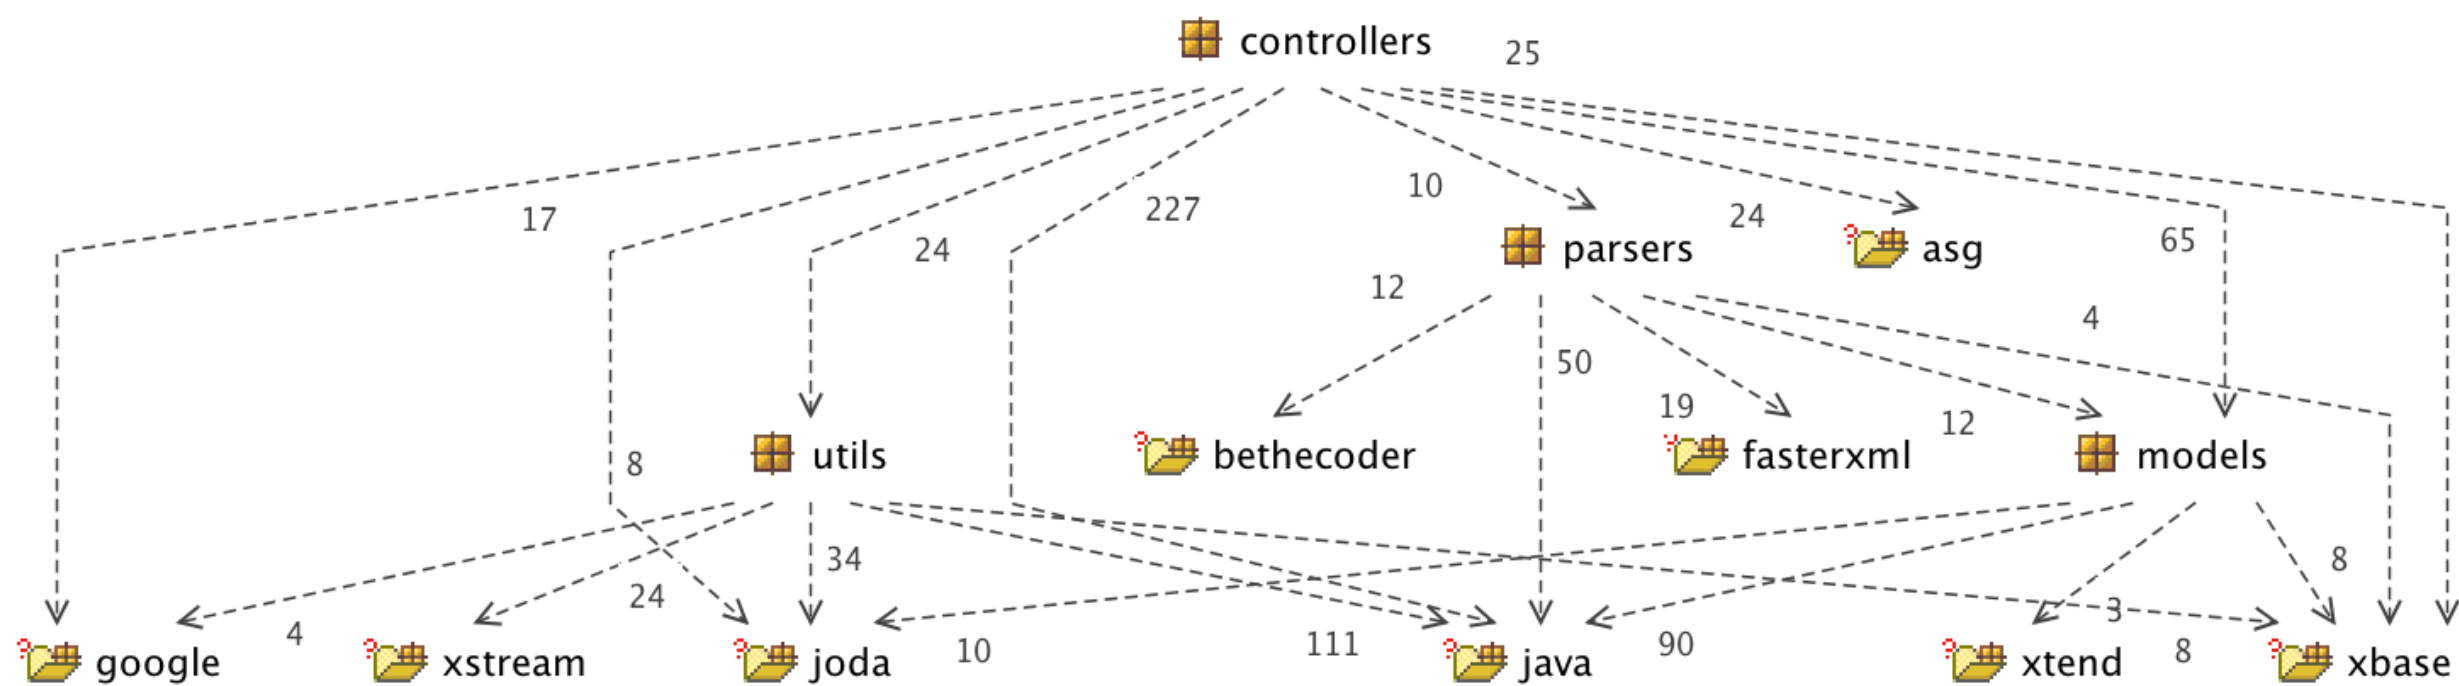

Item	Tangled	Fat	Size	XS
● pacemaker-console-xtend.models.Activity.equals(java.lang.Object):boolean		17	128	15
● pacemaker-console-xtend.models.User.equals(java.lang.Object):boolean		16	118	7

Structural over-complexity

Dependency graph (with externals)
